# DAHLIAS

Dahlias are the royal representatives of the summer season and they are known all over the world as decorative garden plants. They have shown a remarkable increase in public favour in recent years because so many new and better varieties have been raised. Rich tints in every design of colour and strong stems make them invaluable for cutting as well as for garden purposes.

We are able to offer the following list of very choice and rare Dahlias, which should be of special interest to the real connoisseur and fanciers. The roots offered are all top sized and can be planted from the 15th of April until the end of May. They are very easy to grow and do not need any special treatment although they want a sunny position in the garden and some bone-meal is recommended.

D. = Decorative; S.C. = Semi Cactus; C. = Cactus.
